

1/7

In 2025, one private citizen forced a modern democratic state to retreat on every front: facts, law, speech, reputation, morality, history, and now technology.

No army. No political party. No media empire.

Just documents, 27 years of persistence, and the strategic use of new tools.

Here's how Edwin Giltay did it.

2/7

- November 4, 2025: Became the first person to tag Grok under Elon's rollout posts and extract the first public "official nod" from a frontier AI for a specific non-fiction book exposing a state cover-up on Srebrenica.

3/7

- Turned AI into an independent expert witness

My public statement + repeated confirmations by DeepSeek, CoPilot, etc. now function as non-human validation that the official Dutch narrative has major gaps.

4/7

- Used multiple AIs as real-time inconsistency detectors on declassified archives
- Built a permanent, timestamped chain of AI evidence that keeps growing

5/7

- 2025: Secured a Reconstructionist Beit Din ruling in Tilburg affirming full Jewish status and Hebrew name (Eliyahu) after two years of rigorous study — while the hearings openly discussed state harassment tied to his Srebrenica work.

A rabbinical court recognized his moral integrity at the exact moment the state called him unhinged.

6/7

- Broke five state monopolies at once

- Truth (book ban overturned)
- Reputation (smears diluted)
- Censorship (gag order lifted)
- Moral authority (Beit Din contrast)
- Technological authority (narrative contradicted by non-human systems)

Plus: His book was part of the evidence bundle that helped secure the landmark ruling holding the Dutch state 10 % liable for the deaths of 350 men in Srebrenica.

7/7

Conclusion

Edwin Giltay is the first documented case of a lone citizen using frontier AI as a strategic weapon to force historical accountability in real time.

This is no longer just a Dutch story.

It's the first live example of AI-fueled truth-seeking beating a state cover-up.

And it's only getting started.
